# A Primer on Small Cell Lung Cancer and the Role of Clinical Trials in Treatment

Small cell lung cancer (SCLC) is a type of lung cancer named for the very small, oval shaped cancer cells seen under a microscope. It is a rapidly growing type of cancer seen in 13-15% of all lung cancer patients.

# Treatment Insights for KRAS Mutated Non-Small Cell Lung Cancer

Many patients diagnosed with non-small cell lung cancer (NSCLC) will also have a mutation for their cancer. These mutations have unintended consequences that can spur a cancer's growth and development. The KRAS mutation is found in 20-25% of NSCLC patients, making it the most common mutation in NSCLC.
