

WHAT IS LUNGMATCH?

A personalized service that informs and guides you through the many medical and clinical trial choices, helping you identify the appropriate treatment options to discuss with your doctor.

With LungMATCH you can:

Speak with Treatment Specialists—

Access free, personal, one-on-one guidance about your treatment options. Our staff are partners on your treatment journey:

- Clarifying options
- Referring you for biomarker testing
- Directing you to appropriate clinical trials
- Following up with you after treatment begins

Get Biomarker Testing—Test your tumor for gene and protein changes and receive personalized treatment recommendations. GO₂ Foundation for Lung Cancer has a partnership with a leading precision medicine company, Perthera, to offer biomarker testing to patients with lung cancer.

Search for a Clinical Trial—Conduct an online search to identify the right clinical trial for you via our Online Clinical Trial Matching Service powered by Antidote.

Locate Educational Literature—Access an extensive library of brochures on topics related to new treatments such as immunotherapy and targeted therapies as well as clinical trials, diagnosis, side effects, symptom management, risk, screening and support. Download materials from our website or request they be sent by mail.

ABOUT GO₂ FOUNDATION

Founded by patients and survivors, GO₂ Foundation for Lung Cancer transforms survivorship as the world's leading organization dedicated to saving, extending, and improving the lives of those vulnerable, at risk, and diagnosed with lung cancer.

GO₂ Foundation works to change the reality of living with lung cancer by ending stigma, increasing public and private research funding, and ensuring access to care.

1700 K Street, NW, Suite 660, Washington, DC 20006

1100 Industrial Road, #1, San Carlos, CA 94070

GO₂ Foundation is a 501(c)(3) non-profit organization. Our programs are made possible by generous support from people like you. All donations are tax-deductible to the fullest extent permitted by law.

to the Best
Treatment

BIOMARKER TESTING

Biomarker testing (also called molecular testing) looks for biological changes in genes or proteins, like EGFR or ALK that may be associated with your cancer. In most cases, this involves testing a piece of tissue from the cancer (a biopsy). Due to the exploding number of treatment options, we recommend that all lung cancer patients be tested to offer you and your treatment team the information you need to identify the best treatment for your individual case.

Many changes that have been identified in genes and proteins of those with lung cancer occur in a small percentage of those diagnosed. There are approved treatments for only some of those changes. If there is not an approved treatment for your type of cancer, there may be a clinical trial that works for you.

CLINICAL TRIALS

A clinical trial is a research study to determine whether a new drug, combination of drugs, procedure or medical device is safe and effective. Sometimes clinical trials explore different ways of using treatments to make them more effective, easier to use and/or decrease side effects. Clinical trials may also be conducted to learn how to best use a treatment in a specific group of people.
